Eternal Repos CRM — How It Works (Simple Flow)

1. The big picture

A family contacts Eternal Repos > it becomes a **lead** > staff talk to the family, prepare a plan and quote > the family confirms and pays > a driver and vehicle are assigned > the service happens > payment is closed and feedback is collected.

Every case keeps **one permanent reference number** (for example `ER-DEL-26OCT-042-PK`) from the first call to the last receipt, so sales, operations and accounts always talk about the same case.

2. Where cases come from

Source	What happens
Website "Arrange a Service" wizard	Creates a lead automatically (source: Website)
Book a Star / Name a Star	Creates a Star booking
Customised package	Creates a lead with the chosen items
Phone, WhatsApp, walk-in	Staff click **+ New lead** on the Leads screen
Google / Meta ads	Source and campaign are recorded on the lead

Leads with the same phone number are flagged as **possible duplicates**.

3. Case stages (status)

`New Inquiry > Contacted > Plan Review > Quotation > Confirmed > In Execution > Completed`

Stage	Meaning	Who usually handles it
New Inquiry	Just arrived, nobody has called yet	Sales / coordinator
Contacted	First call done	Sales / coordinator
Plan Review	Needs are understood, plan being shaped	Coordinator
Quotation	Quote sent to the family	Sales
Confirmed	Family agreed (usually an advance is paid)	Coordinator
In Execution	Service is happening today	Operations / driver
Completed	Service done and closed	Accounts closes payment

4. Payment stages

`Estimate > Final Amount > Payment Requested > Advance Received / Payment Received > Receipt Generated`

Payments can come through the payment gateway or be recorded by staff. Every payment is kept in the payment history.

5. Step by step

1. **Lead arrives** (Leads screen). Check the source, remove duplicates, set priority and customer type.
2. **First contact.** Call the family, note the need (Immediate, Planned, Transfer, or Not sure) and move to *Contacted*.
3. **Plan.** Choose from Service Plans or build one in the Sales Configurator. A plan can be shared with the family through a link.
4. **Quotation** (Quotations screen). Price vehicle, distance, staff, florals, rituals and extras. Status goes Draft > Sent > Viewed > Approved.
5. **Booking confirmed** (Bookings screen). Collect advance payment; the case becomes *Confirmed*.

6 **Operations** (Operations screen). Pick a driver and vehicle (busy or on-leave ones are greyed out; **Suggest** picks a free pair; **Custom…** lets you type a name not in the list). Assign a coordinator, set pickup and destination, tick the "Before the service" checklist.
7 **Service day.** The driver opens the **Driver App**: Start Journey > Arrived at Pickup > Service Started > Reached Destination > Complete Service. Live location shows in the CRM.
8 **Close.** Mark *Completed*, collect the balance, generate the receipt (Payments, Documents).
9 **After.** Send feedback request and tributes; check Reports.

6. Screens at a glance

Group	Screens
Sales	Leads, Stars, Name a Star, Customers, Service Plans, Sales Configurator, Quotations
Delivery	Arrangements, Bookings, Operations, Driver App
Fleet & people	Vehicles, Drivers & Teams, HR Overview
Money & records	Payments, Documents
Care & insight	Communications, Feedback, Reports
Admin	Dashboard, Settings

The **Dashboard** shows six numbers (Active Arrangements, Immediate Requests, Upcoming Today, Services In Progress, Completed Today, Pending Payments). Click one to see its cases right below.

7. Who can do what

Role	Main use
Admin	Everything, including deleting leads and settings
Sales	Leads, quotations, plans
Coordinator	Cases from contact to completion
Operations	Drivers, vehicles, service day
Accounts	Payments, receipts
HR	Team and HR overview
Backend executive	Back-office data entry
Driver	Only the Driver App

Admins can change which screens each role sees in Settings.

8. Behind the scenes

- Database and login: Supabase (Postgres, Auth, row-level security, realtime updates).
- Website bookings reach the CRM through a public booking function; everything else needs a staff login.
- Deleting a lead hides it but keeps the record for audit.
